

## GMF Provides Medical Needs for Under-Served Communities Around the World

Eight medical professionals who shared a common goal of providing needed medical care for less privileged individuals became a reality when Global Medical Foundation was launched in 1996.

These physicians believed they could provide high quality, free medical and surgical care to indigent people in communities where daily living is a struggle and medical care almost non-existent.

Their multi-ethnic diverse backgrounds allowed them to develop cultural sensitivities to create a unique, charitable medical organization.

Providing ongoing medical and surgical missions enables the Global Medical Foundation physicians to use their talents, skills and knowledge in a caring and giving manner for the betterment of mankind.

Their charitable work respects the culture and tradition of the people they serve for they and the volunteers reflect the kindness and generosity of the people of the United States of America.

One hundred percent of donations solicited are used for medicines, supplies and shipping costs. Volunteers pay all of their own expenses.

*There is no greater service to mankind than to provide medical assistance.*

## We Need Your Help Bringing Medical Assistance to Those in Need

**Please provide financial support**

Support Global Medical Foundation and make a difference

Global Medical Foundation has established a respected and eminent reputation for providing high quality medical care throughout the world. Many of the surgical procedures performed are not available in many of the countries we visit.

Arranging medical missions involves coordination with national and local governments as well as local health professionals. Mission site visits must be conducted in advance to assess what is needed. We volunteer our time and pay our own expenses for these visits. We choose mission sites based on requests and specific needs of the communities we visit.

Once a mission site has been established we ask for support from pharmaceutical and medical equipment companies, and we invite talented and experienced physicians, nurses, paramedical professionals and humanitarians to join us in providing the skills necessary for a successful mission.
